## UNIFACE 10

Enterprise Edition

With this edition of the Uniface 10 IDE, developers can create and maintain all Uniface application types - Windows, web, mobile and character.

### Getting Started

To help get you started:

- Tutorials are provided in the Uniface documentation. Choose **Main Menu (≡) > Help**.
- For existing Uniface users, the What's New section in the documentation provides details about differences between Uniface 9 and Uniface 10.
- For all Uniface users, our customer site [uniface.info](http://uniface.info) provides technical support, migration support, forums, blogs, software updates, downloads, samples, announcements, and more.

### Migration

For existing applications, a migration path is provided. When an export file made with Uniface 9.6 or 9.7 is imported into Uniface 10, its contents are automatically migrated to the new Repository structure. More information about the migration process is provided in documentation under Migration to Uniface 10.
